ACCURATE FOR LIFE

# CROSSLINE LINE LASER WITH PLUMB SPOT

LX22G

LX22

The LX22 is the most popular line laser in the range. This is due to the high quality line and accuracy. The Vertical beam gives a very "tall" line and if the unit is placed on the floor it will start 100mm in front, go along the floor, up the wall and back across the ceiling to a point beyond the laser. The horizontal beam gives a very wide line and if the unit is placed into a corner of a room at 45° the lines start 500mm from the unit and project all the way around the room. The laser also gives a vertical plumb spot which is perfect for marking out for down-lights etc.
